Art Unit: 3729

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Fujita et (Pat No. 6,612,026 B1) hereinafter Fujita et al.

Fujita et al teach setting press-contact terminals (1) in terminal fitting portions (14) (Cf. Fig 7) provided in a receiving jig (12). Wires are placed above the press-contact terminals and are press fitted.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fujita et al in view of Tsuji et al (Pat. No 5,575,061) (of Record); hereinafter Tsuji et al.

Fujita et al is applied as it was hereinabove. That is Tsuji et al teach terminals which are placed into grooves and press-fitted by a press-contact head. Tsuji et al teach

sequentially press-fitting (Cf. Col 10) wires into terminls. It would have been obvious to a POSITA at the time of the invention to sequentially press-fit terminals, modify the teaching of Fujita et al
